

**Start of procedural analysis for
mobile maintenance strategy
at Airbus Deutschland**

Gesellschaft zur Anwendungsberatung mbH (GAB) and Airbus Deutschland GmbH are evaluating the feasibility of introducing a mobile maintenance system.

Nordenham/Varel/Schwetzingen, 05.09.2006

Within the scope of checking on the potentials to be gained from introducing the Mobile Maintenance Management system offered by GAB and TCON GmbH Airbus Deutschland and GAB/TCON have launched a project on procedural analysis for mobile maintenance strategy.

The study will focus on the production locations at Nordenham und Varel, which are part of the Airbus Centre of Excellence Forward and Aft Fuselage.

The objective is to evaluate alternative action scenarios and examine the added value of mobile maintenance through RFID (radio frequency identification) - technology including the strategic maintenance management of Airbus Industries.

The study will be conducted by staff members of Airbus and GAB within a period of approximately six weeks.
