

Online Management of Measuring and Testing Equipment

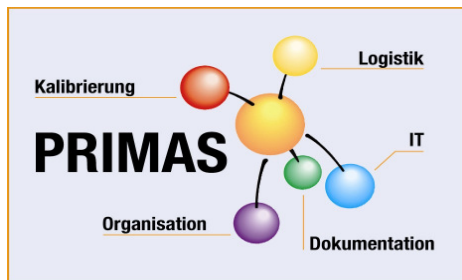

PRIMAS Online is the customer-oriented web-based solution for all aspects of managing measuring and testing equipment. This novelty is available from now on.

Management of testing and measuring equipment is primarily a matter of trust. It doesn't seem to be an easy case for entrusting external partners with the management of measuring and testing equipment, because of the need to keep track of events. PRIMAS-ONLINE is a totally new concept for external maintenance management of measuring and testing equipment. It comprises:

- Paperless documentation
- Independence of location
- No software installation
- SAP-based solution
- Option for one's own master file data maintenance
- Simple/easy to understand menu prompting
- Highest possible security level (128 bit encryption)

The customer retains complete control of his data. Via internet it is possible to view one's own measuring and testing data without any additional software installation from any place at all times.

Testo industrial services operates the complete management of monitoring the measuring and testing equipment, all calibration procedures and documentation. Any measuring and testing device is detected and registered during the prime calibration and its respective data is complemented during each calibration process. In the background the history of the device is automatically stored. Nevertheless, the customer is enabled to change the measuring and testing device's data, install new

equipment or download the appropriate certificate. Comprehensive IT-measures taken and novel technology provides for highest data security. For security reasons all transactions are recorded and provide for a complete audit trail. It is also possible to enter individual authorization concepts relating to individual employees.
